Global Solutions Center and free book

Humanity has now passed the first quarter of this century. The question is: where do we stand today?

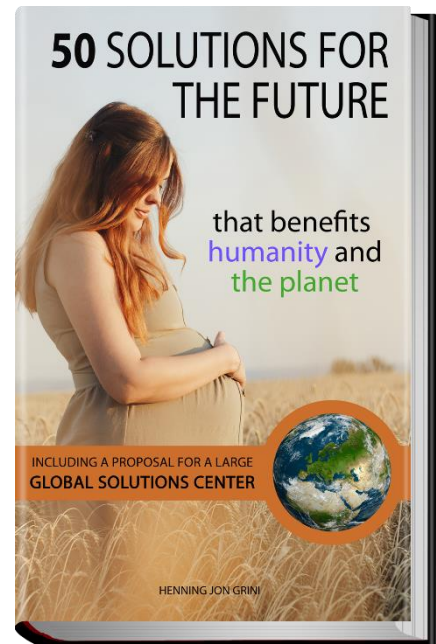

If our goal is to create a civilization without wars and suffering, we have a long way to go. If the goal is a civilization that thrives and cares for nature, we are far behind schedule. The necessary changes are too few and are happening too slowly.

There are several reasons for this: we rarely have a long-term perspective, our focus on profit is too great, and we do not collaborate effectively enough.

We can do better, and here is an idea that could accelerate progress: *Establish a large, dynamic, and impactful **Global Solutions Center** that scan for, map, connect, and communicate what works worldwide, across all sectors.* What exists now is too weak, fragmented and one-sided.

The world is constantly balancing on the edge of catastrophes, whether due to climate change, pandemics, inequality, polarization, wars, or tyrants. We need to think holistically and long-term to address these challenges in the future.

The proposal for such a center is presented in its own website and free book:
www.globalsolutionscenter.org

50 SOLUTIONS FOR THE FUTURE

This book presents 50 significant solutions to the challenges we humans face across all sectors of society.

It also proposes a large Global Solutions Center that could accelerate development.
